

Requirement Management in Life Sciences

Requirement Management "between a rock and a hard place": The Challenge and Opportunity

Readability vs. Lifecycle Management.

Requirement Management is a business challenge IT projects face today. Using Word Document and/or Excel Sheet to produce the URS (User Requirement Specification) in compelling format that lends itself for reading and review. Yet you sacrifice the lifecycle management of a Requirement that a Requirement Management tool provides. On the other hand, Requirement Management tools auto-generate Documentation in non-compelling and non-intuitive formats.

wega is building the bridge between requirement management, development and project management.

We are integrating your R&D.

The Requirement Management Solution from wega Informatik.

The solution consists of three components:

- 1) Enterprise Architect as Requirement Management Tool
- 2) A Governance Process and a methodology to structure your requirements
- 3) A library of RTF templates and formatting functions to produce easy-to-read and visually appealing document of URS (User Requirement), Use Cases, Process and Functional Specification

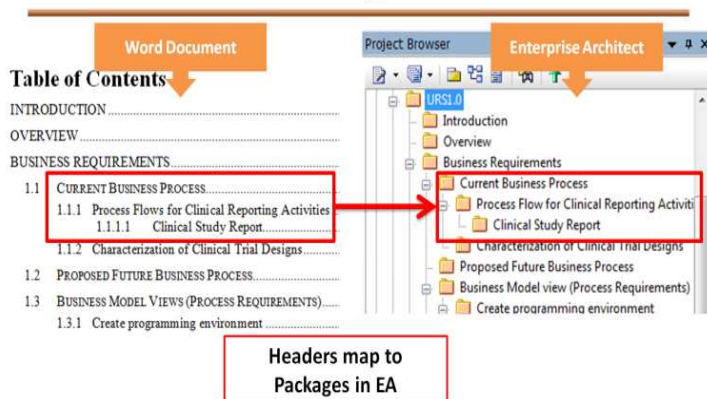

How to get Started?

- 1) Work with wega Informatik to setup the project and package structure
 - 2) Import the User Requirement Specifications (URS), The Functional Specification (FS) into Enterprise Architect (EA) Repository
 - 3) **wega** refines the RTF Template with your company/ project logo, preferred font and color schema.
- ... You are good to go ...

wega stands on your side to help in guiding your project team to reap the benefits of the Requirement Lifecycle Management and visually appealing and easy-to-read project documents:

- The project teams will now regain the capability to manage the lifecycle of User Requirements and the requirement gathering process.
- The Business Users will review and approve professionally done project documents
- The QA team will rely on the requirement repository to produce and link their test cases & scenario and report on the completeness of the system
- The Developers will link their data model, class diagram directly to the requirement's repository
- The Project Manager will be able, with a mouse-click, to produce audit and version report to have clarity changed between releases. That is the clarity that project management needs.
